

CANOPY SET UP INSTRUCTIONS

- Lay canopy out in the exact location where you want to set it up. Preferably a flat area.

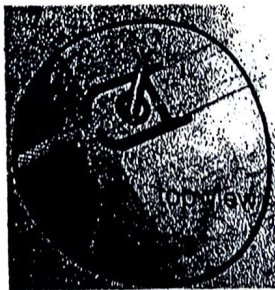

Slide the long center pole under the canopy toward the center hole. Slide the point of the pole through the hole and insert the pin in the hole in the pole. (Not applicable for "E" canopies)

- Pull the ropes out straight from the canopy. Place stakes about 5' out using the ropes as a guide.
- Make sure the stakes are straight across from one another and that the corner stakes form 90 degree angle

- Put the loop of the rope with the wood/medal handle over the stake.
- Hammer stakes in until only enough stake is viewable that will allow you to move rope freely.
- Insert pole through the grommet on the canopy & the metal loop that the ropes are tied too.

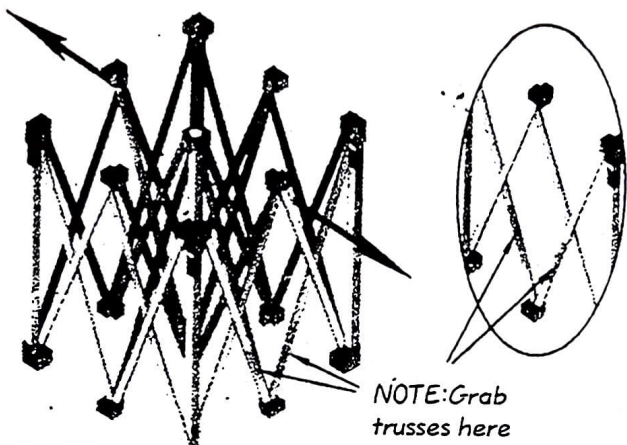

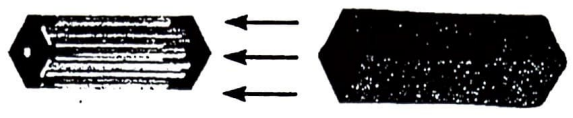

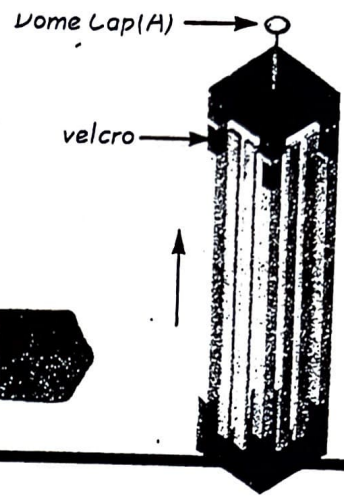

- After stakes are in, start setting up the four corner poles. The wood handles on the ropes are used to secure the poles in place. This can be done by grabbing the pole with your left hand and pulling the wood handle toward the pole with your right hand.
- Tighten corners and then stand up the center pole.
- Add the 4 side poles and tighten all ropes
- Hammer the stakes the rest of the way into the ground.

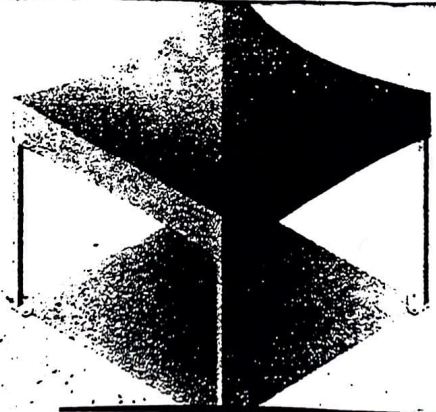

Pop-Up Instructions

STEP 1

Remove frame from case. Stand frame upright, dome cap (A) of center pole facing upward.

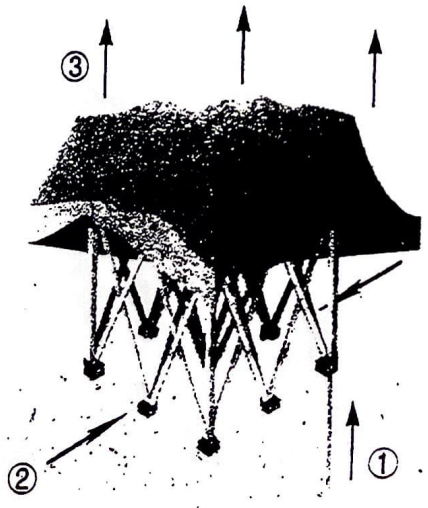

Two persons, working on opposite sides, grab the lower 'V' in the center and step backward away from each other.

Standing in the center of opposing sides, grab the trusses to pull the frame out completely.

DOWN

1. Pull latching pin at the lower leg sockets, making sure to hold socket with heel of hand. Fully retract all lower leg extensions.
2. Pull out each lock pin and allow the frame to relax slightly.
3. Two persons, working on opposite sides, grab the upper 'v' and push frame together halfway.
